

Focus on your core business with Blueriq Cloud

Introducing the Blueriq Cloud

The Blueriq Platform enables organizations to optimize their business processes. This is achieved by modeling business processes using our modeling platform Encore and making them available for the end user with the Blueriq Runtime. Now, both resources are available in the Cloud.

Focus on your core business

As an organization, it can be challenging to truly stay focused on your customer and their needs, especially when solutions are business-critical and the IT-landscape is complex. You spend a lot of time on tasks such as infrastructure maintenance and management. Transitioning to Blueriq Cloud takes this pressure off your organization. Blueriq takes care of all necessary conditions for successfully running your application in the Cloud, allowing you to spend more less time on maintenance and related tasks. Your solution in the Cloud provides more flexibility, reliability, efficiency, creates a shorter time-to-market and helps you reduce IT costs. Ultimately, it gives you more room to focus on your core business: adding value for your customers.

With Encore Cloud, you can design and manage applications from the Cloud in a safe and stable environment. When you also choose Runtime Cloud, you can run your applications in a private cloud or entirely in the Blueriq Cloud. Different plans are available to best fit the needs of your organization.

Blueriq Cloud benefits

- Hasslefree
- Secure and stable
- Always up-to-date
- Flexible and scalable
- Guaranteed Uptime
- Short time-to-market

Available resources and plans

Choose what you need: the power of both Encore and Runtime or just the strength of Encore. There are different plans available for both options (Standard, Plus and Premium) to best fit the needs of your organization. Details about the exact differences between these plans can be requested. Below you can find a general overview of what's included in both options.

Both options offer:

- The latest Blueriq version (previous Blueriq versions are available for Plus and Premium)
- AWS: shared or dedicated infrastructure
- Guaranteed uptime between 95 - 99,8%
- Migration to the latest Blueriq version
- Availability of Blueriq Publisher
- Support during office hours and 24/7 via the support portal
- Model migration consultation (Plus and Premium)
- CI/CD integration (Premium)
- Quality monitoring
- Unlimited online training and expert services (Plus and Premium)
- Encore API (Plus and Premium)
- SOC2, ISO9001, ISO27001 certified

ENCORE CLOUD

+

ENCORE CLOUD

Develop applications online in the Cloud within a secure and stable environment. Run applications in a private cloud or on-premise.

- Encore Cloud Modelling
- Runtime in a private cloud or on-premise
- Available in Standard, Plus and Premium

Expert services and tools for quality

By choosing Blueriq Cloud, you not only get cloud availability and security, but also support from our experts and tools to maintain the highest quality of your solution. When you opt for Plus or Premium, our experts provide advice on software, model and data migration and custom software. Our experts are available for 2 or 4 hours per month to address your substantive questions. Additionally, you have access to quality monitoring and assurance through the Blueriq Model Analyzer (BMA) and the Blueriq Publisher. In short, our experts and tools are ready to assist with everything you need regarding your solution.

Security

At Blueriq, security is paramount. We hold the ISO 27001, ISAE 3402, ISO 9001 and SOC2 certifications for the security, availability and integrity of our services. Additionally, we have successfully completed the AWS Well-Architected Framework Assessment, which ensures that our cloud solutions meet the highest standards. This provides a secure and reliable environment for your business activities.

Built on AWS

The Blueriq Cloud is a multi-tenant cloud built on Amazon Web Services (AWS) and is fully hosted and managed by Blueriq. With AWS as the cloud host, the Blueriq Platform is available as a PaaS solution, allowing new Blueriq applications to be deployed in the cloud without the scalability limitations and high initial costs of on-premises hardware.
